Art Unit: 1641

DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-10, drawn to a method for detecting or quantitating an analyte in a liquid sample, classified in class 435, subclass 4.
 - II. Claims 11-28, drawn to a diagnostic device for detecting an analyte in a liquid sample, classified in class 422, subclass 50.
 - III. Claims 29-34, drawn to a diagnostic device for detecting each of a plurality of selected analytes in a liquid sample, classified in class 435, subclass 287.1.

The inventions are distinct, each from the other because of the following reasons:

- 2. Invention I is related to Invention II and III as process and apparatuses for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, a number of devices, and not just those of Inventions II and III can detect an analyte in a liquid sample. These devices may use various binding pairs, such as antigen-antibody, hormone-receptor, drug-receptor, or avidin-biotin, and may also utilize various biosensors, such as gravimetric or SPR.
- 3. Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different

Application/Control Number: 09/517,597

Art Unit: 1641

inventions serve different purposes. The device of Invention II functions to detect an analyte in a liquid sample, whereas, the device of Invention II functions to detect multiple analytes.

Furthermore, the multiple biosensors and the adaptation of the sample to be carried through each sample-flow pathway are not required in Invention II.

- 4. Because these inventions are distinct for the reasons given above, have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter, and the search required for one group is not required for the others, restriction for examination purposes as indicated is proper.
- 5. A telephone call was made to Peter Dehlinger on August 28, 200 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kartic Padmanabhan whose telephone number is 703-305-0509. The examiner can normally be reached on M-F (8:30-5:00).

Application/Control Number: 09/517,597

Art Unit: 1641

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Long Le can be reached on 703-305-3399. The fax phone numbers for the organization where this application or proceeding is assigned are 703-308-4243 for regular communications and 703-305-3014 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0196.
